

Fuel Storage Bladders with Spill Containment Berms

Project: Supply Fuel Storage Bladders with Spill Containment Berms

Client: **aggreko**

Summary: We responded to an urgent requirement for fuel storage bladders used to support power blackout solutions in Malawi, South East Africa. The fuel storage equipment was required to accompany Aggreko's provision of 84 power generators for two sites at Lilongwe and Blantyre.

Challenges: Butyl Products has been working with Aggreko for 5 years, developing fuel storage systems suitable for remote camps / site applications; providing a plug and play modular solution for the safe storage of diesel fuels.

Our Solution: As a result of the collaboration between the two companies our Research and Development engineering team designed a fuel storage system for each site, capable of handling up to 400,000 litres of fuel that conforms to Aggreko's exacting standards; and that is fully compatible with their existing equipment. This resulted in less time spent on installation, with ground preparation time minimised using our 'Easy-Up' secondary containment berms, thereby leading to faster commissioning of both sites.

Result: The feedback received from the Aggreko team in country was extremely positive, particularly regarding the hassle free shipping from the UK and ease of installation of both the bladders and the berms.

“ The entire system was so easy to install, we’re very pleased with the whole project.... looking forward to working with you as our new preferred supplier”
